Double-stranded cDNA was prepared from cell line RNA. 5'
and 3' adaptors were used in cloning as follows: 5'
adaptor sequence: 5'-CACGCCATTATGGCC-3' and 3' adaptor
sequence: 5'-ATTCTAGAGGCCGAGGCGCGATG-dT(30)BN-3'
(where B - A, C, or G and N - A, C, G, or T). Average
insert size 1.75 kb (range 0.9-4.0 kb). 15/15 colonies
contained inserts by PCR. This library was enriched for
full-length clones and was constructed by Clontech
Laboratories (Palo Alto, CA)."

"C. LOWTAINING FIBRILS, THE COLL DOMAIN GOULD BE ASSOCIATED WITH THE
SURFACE OF THE FIBRILS. AND THE COLL AND NC3 DOMAINS MAY BE
LOCALIZED IN THE PERIFIBRILLAR MATRIX.
"C. SUBBINIT: TRIMER OF IDENTICAL CHAINS EACH CONTAINING 190 kDa OF
NONTRIPLE-HELICAL SEQUENCES.
"C. ALTERNATIVE PRODUCTS.
"EVENT—Alternative splicing, Named isoforms=2;
Comment—The final tissue form of collagen XII may contain
homodrimers of either isoform Long or isoform Short or any
combination of isoform Long and isoform Short. Only isoform Long
in embryonic tissue than isoform Short;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -i SIMILARITY: BELONG TO THE FIBRIL-ASSOCIATED COLLAGENS WITH INTERRUPTED HELICES (FACIT) FAMILY.
-i SIMILARITY: Contains 4 VWFA domains.
-i SIMILARITY: Contains 18 fibronectin type III domains.
-i SIMILARITY: Contains 18 fibronectin type III domains.

-1 TISSUE SPECIFICITY: TYPE XII COLLAGEN IS PRESENT IN TENDONS,
LIGAMENTS. PERICHONDRIUM, AND PERIOSTEUM, ALL DENSE CONNECTIVE
TISSUES CONTAINING TYPE I COLLAGEN.
-1 DOMAIN: THIS SEQUENCE DEFINES FIVE DISTINCT DOMAINS, TWO TRIPLE-
HELICAL DOMAINS (COL1 AND COL2) AND THREE NONTRIPLE-HELICAL
DOMAINS (NC1, NC2, AND NC3).
-1 PTM: The triple-helical tail is stabilized by disulfide bonds at
each end.
-1 PTM: Prolines at the third position of the tripeptide repeating
unit (G-X-Y) are hydroxylated in some or all of the chains.
-1 PTM: 0-91pcosylated; glycosaminoglycan of chondrotitin-sulfate type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PRINTS; FRUYAS; 18.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SpliceOsonal complex E.";

Mol. Cell 5:779-787(2000).

-!- FUNCTION: SEBBBLY FORMED BY THE STABLE BINDING OF UZ SNRNP TO THE COMPLEX ASSEMBLY FORMED BY THE STABLE BINDING OF UZ SNRNP TO THE BRANCHPOINT SEQUENCE (BPS) IN PRE-WRNA. SEQUENCE INDEPENDENT BINDING OF SF3A/SF3B COMPLEX UPSTREAM OF THE BRANCH SITE IS ESSENTIAL, IT MAY ANCHOR UZ SNRNP TO THE PRE-MRNA. MAY ALSO BE INVOLVED IN THE ASSEMBLY OF THE 'E' COMPLEX. SF384 HAS BEEN FOUND IN COMPLEX 'B' AND 'C' AS WELL. BELONGS ALSO TO THE MINOR U12-DEPENDENT SPLICEOSOME, WHICH IS INVOLVED IN THE SPLICING OF RARE CLASS OF UNCLEAR PRE-MRNA INTRON.
                                                    01-NOV-1997 (Rel. 35, Created)

-!- SUBGNIT: The potassium channel is probably composed of a homo- or heterotetrameric complex of pore-forming subunits.
-!- SUBCELLUIAR LACATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: Highly expressed in the heart sinoatrial node
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ishli T.M., Takano M., Xie L.-H., Noma A., Ohmori H.; "Molecular characterization of the hyperpolarization-activated cation channel in rabbit heart sincatrial node."; Blol. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
